

FSUSB30

Low-Power 2-Port Hi-Speed USB 2.0 (480Mbps) Switch

Features

- Low On Capacitance, 3.7pF (typical)
- Low On Resistance, 6.5Ω (typical)
- Low power consumption (1μA maximum)
 - 10μA maximum I_{CC}T over an expanded control voltage range (V_{IN} = 2.6V, V_{CC} = 4.3V)
- Wide -3dB bandwidth, >720MHz
- 8KV ESD protection
- Power-Off protection when V_{CC} = 0V; D+/D- pins can tolerate up to 5.25V
- Packaged in:
 - Pb-Free 10-lead MicroPak™ (1.6 x 2.1mm)
 - Pb-Free 14-lead DQFN
 - Pb-Free 10-lead MSOP
 - Pb-Free 10-lead UMLP (1.4 x 1.8mm)

Applications

- Cell phone, PDA, Digital Camera, and Notebook LCD Monitor, TV, and Set-top Box

Related Application Notes

- AN-6022 Using the FSUSB30 / FSUSB31 to Comply with USB 2.0 Fault Condition Requirements

General Description

The FSUSB30 is a low-power, two-port, high-speed USB 2.0 switch. Configured as a double-pole double-throw (DPDT) switch, it is optimized for switching between two high-speed (480Mbps) sources or a Hi-Speed and Full-Speed (12Mbps) source. The FSUSB30 is compatible with the requirements of USB2.0 and features an extremely low on capacitance (C_{ON}) of 3.7pF. The wide bandwidth of this device (720MHz), exceeds the bandwidth needed to pass the third harmonic, resulting in signals with minimum edge and phase distortion. Superior channel-to-channel crosstalk minimizes interference.

The FSUSB30 contains special circuitry on the D+/D- pins which allows the device to withstand an overvoltage condition when powered off. This device is also designed to minimize current consumption even when the control voltage applied to the S pin, is lower than the supply voltage (V_{CC}). This feature is especially valuable to ultra-portable applications such as cell phones, allowing for direct interface with the general purpose I/Os of the baseband processor. Other applications include switching and connector sharing in portable cell phones, PDAs, digital cameras, printers, and notebook computers.

HIGH	LOW	D+, D- = HSD2 _n

Absolute Maximum Ratings

Stresses exceeding the absolute maximum ratings may damage the device. The device may not function or be operable above the recommended operating conditions and stressing the parts to these levels is not recommended. In addition, extended exposure to stresses above the recommended operating conditions may affect device reliability. The absolute maximum ratings are stress ratings only.

Symbol	Parameter	Minimum	Maximum	Unit	
V_{CC}	Supply Voltage	-0.5	+4.6	V	
V_{CNTRL}	DC Input Voltage ⁽¹⁾	-0.5	+4.6	V	
V_{SW}	DC Switch Voltage ⁽¹⁾	HSDnX	0.5	$V_{CC} + 0.3$	V
		D+,D- when $V_{CC} > 0$	0.5	$V_{CC} + 0.3$	V
		D+,D- when $V_{CC} = 0$	-0.50	5.25	V
I_{IK}	DC Input Diode Current	-50		mA	
I_{OUT}	DC Output Current		50	mA	
T_{STG}	Storage Temperature	-65	+150	°C	
ESD	Human Body Model	All Pins		8	kV
		I/O to GND		8	kV

Note:

1. The input and output negative voltage ratings may be exceeded if the input and output diode current ratings are observed. DC switch voltage may never exceed 4.6V.

Recommended Operating Conditions

The Recommended Operating Conditions table defines the conditions for actual device operation. Recommended operating conditions are specified to ensure optimal performance to the datasheet specifications. Fairchild does not recommend exceeding them or designing to absolute maximum ratings.⁽²⁾

Symbol	Parameter	Minimum	Maximum	Unit
V_{CC}	Supply Voltage	3.0	4.3	V
V_{IN}	Control Input Voltage	0	V_{CC}	V
V_{SW}	Switch Input Voltage	0	V_{CC}	V
T_A	Operating Temperature	-40	+85	°C
θ_{JA}	Thermal Resistance, 10 MicroPak		250	°C/W

Note:

2. Control input must be held HIGH or LOW and it must not float.

DC Electrical Characteristics

All typical values are at 25°C unless otherwise specified.

Symbol	Parameter	Conditions	V _{CC} (V)	T _A = -40°C to +85°C			Unit
				Min.	Typ.	Max.	
V _{IK}	Clamp Diode Voltage	I _{IN} = -18mA	3.0			-1.2	V

Application Guidance: Meeting USB 2.0 Vbus Short Requirements

In section 7.1.1 of the USB 2.0 specification, it notes that USB devices must be able to withstand a Vbus short to D+ or D- when the USB device is either powered off or powered on. The FSUSB30 can be successfully configured to meet both these requirements.

Power-Off Protection

For a Vbus short circuit, the switch is expected to withstand such a condition for at least 24 hours. The FSUSB30 has specially designed circuitry which prevents unintended signal bleed through as well as guaranteed system reliability during a power-down, over-voltage condition. The protection has been added to the common pins (D+, D-).

Power-On Protection

The USB 2.0 specification also notes that the USB device should be capable of withstanding a Vbus short during transmission of data. Fairchild recommends adding a 100Ω series resistor between the switch VCC pin and supply rail to protect against this case. This modification works by limiting current flow back into the V_{CC} rail during the over-voltage event so current remains within the safe operating range. In this application, the switch passes the full 5.25V input signal through to the selected output, while maintaining specified off isolation on the un-selected pins.

Figure 16. Adding 100Ω resistor in series with the V_{CC} supply allows the FSUSB30 to withstand a Vbus short when powered up
