USB1T20 Universal Serial Bus Transceiver

General Description

The USB1T20 is a generic USB 2.0 compliant transceiver. Using a single voltage supply, the USB1T20 provides an ideal USB interface solution for any electronic device able to supply 3.0V to 3.6V. It is designed to allow 5.0V or 3.3V programmable and standard logic to interface with the physical layer of the Universal Serial Bus. It is capable of (12Mbit/s) and low speed (1.5Mbit/s) data rates.

Packaged in industry standard TSSOP and Fairchild's ultra-small 2.5mm x 2.5mm MLP package, the USB1T20 is ideal for ultra-portable electronics and other space constrained applications.

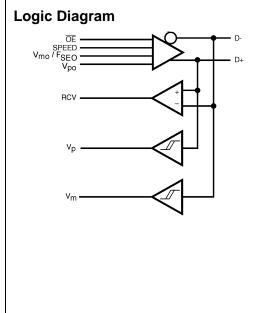

Features

- Complies with Universal Serial Bus specification 2.0 for FS/LS applications
- Utilizes digital inputs and outputs to transmit and receive USB cable data
- Supports 12Mbit/s "Full Speed" and 1.5Mbit/s "Low Speed" serial data transmission
- Supports single-ended and differential data interface as function of MODE
- Single 3.3V supply
- ESD Performance: Human Body Model > 9.5 kV on D-, D+ pins only
- > 4 kV on all other pins
- Space saving 14-terminal MLP package

The "Recommended Operating Conditions" table will define the conditions for actual device operation.

Note 3: The input and output voltage ratings may be exceeded if the input and output clamp current ratings are observed.
